Title : The Pecan - A Valuable Species for Forest Cultivation in Central Asia.

Orig Pub : Izv. AN UzSSR, 1956, No 9, 94-96

Abstract : A dendrological description is given of the pecan and its value as a forest product is determined. It is indicated that this species holds wide promise for cultivation in Central Asia. Since 1926, pecan has been raised in an experimental arrangement in the Turkmen SSR. Under artificial irrigation, it passes favorably through both the summer heat and winter frosts. At 9 years, it reaches 10-10.5 m in height and can find wide use in

Title : Introduction and Selection of Nuts.

Orig Pub : Sb. rabot po lesn. kh-vu M... L., Goslesbumizdat, 1957,
45-58.

Abstract : Summary by the Middle-Asiatic Institute for Forestry of the characteristics of various specimens of nuts subsequent to experimental research work. Fruit-bearing trees of the black nut *Juglans nigra* L. is found in all Middle-Asiatic republics and in Kazakhstan. Under conditions of artificial irrigation, the black nut tree favorably endures local conditions, is fast-growing and fruit-bearing, and resists frosts up to -28 to -29°C. During its first years of growth the black nut tree is less resistant to high summer temperatures in comparison with the walnut tree, but more

| <p><i>*Investigation of the Heat Effect in Duralumin During Deformation by Forging. E. F. Bachmetov and B. M. Rowinski (Trudi Vsesoyuznogo Nauchno-Issledovatel'skogo Instituta Aviatsonnykh Materialov (Mitt. Forschungsinst. Luftfahrtmaterialprüfung). 1933, (1), 61-73).—[In Russian, with German summary.] On forging Duralumin at 20° C. with a deformation of 89-2%, the temperature of the specimen may increase to 317° C., about 77% of the applied energy appearing as heat. With increasing deformation temperature the increase in temperature produced by the work decreases. Only 1-2% of the energy remains as internal stress in the metal. With deformations of up to 18.8%, no deformation texture can be detected; only after a deformation of 32.5% can the texture axis be determined. A curve is given showing the dependence of the specific work required to produce deformation on the magnitude of the relative deformation.—A. R. P.</i></p> | | | |

Rowiński L. Technical Indices and Methods of Design Calculation for the Preparation of a Preliminary Plan of Construction Organization.

„Wskaźniki techniczne i sposoby obliczeń projektowych do opracowania wstępnego projektu organizacji budowy”. Przegląd Budowlany. No. 4, 1953, pp. 135—148, 8 figs., 18 tabs.

In elaborating a preliminary design of construction organization it is necessary to have technical indices to make it possible to determine the kind and quantity of means envisaged for the realization of the construction. Indices are given for calculating the quantity of electric power, and of water, for determining the delivery time of materials, the staff necessary, machines, tools and transport units.

TITLE: Hypersonic flows /

SOURCE: Warsaw. Instytut Lotnictwa. Prace, no. 23, 1964, 36-54

TOPIC TAGS: aerodynamics, hypersonic flow, Newton flow model, linearization theory, shock wave, gas relaxation, aerodynamic heating

ABSTRACT: This is a review article concerning the problems of the aerodynamics of very high velocities. The following subjects are discussed: The characteristic phenomena in hypersonic flow and the accepted assumptions made in the analysis of this type of flow. Newton's flow model and its limitations. The criterion of similitude. The analogy between a two-dimensional stationary flow and one-dimensional non-stationary flow. Hypersonic small-disturbance theory. Comparison between Ackeret's linearization theory and hypersonic flow theory for the case of a flow past a slender body. Relationships for a plane, oblique and curved shock wave. Application of the blast-wave theory to hypersonic flows. The analogy between a cylindrical shock wave and hypersonic flow past a slender blunt-nosed axially symmetric body. The distribution of pressure and the shape of the shock

wave for axially symmetric flow past a cylinder having a semi-spherical nose. Hypersonic flow past blunt-nosed bodies. The effect of viscosity and high temperatures on hypersonic flow. The phenomena of gas relaxation. Relaxation time constants for air constituents. Heat transfer in hypersonic flow (aerodynamic heating). Enthalpy considerations in heat transfer during hypersonic flow. Variation of shock wave thickness with altitude. Slip flow. Flow of rarefied gases. Orig. art. has: 27 figures and 144 formulas.

TITLE: Experimental investigations of hypersonic flows. Part 1

SOURCE: Technika lotnicza, no. 12, 1964, 305-310

TOPIC TAGS: hypersonic flow, wind tunnel, aerodynamics, plasma channel

ABSTRACT: This review paper briefly discusses the general requirements which have to be met when testing the aerodynamic behavior of models at hypersonic speeds, and also the main parameters measured. An attempt is made to classify hypersonic wind tunnels according to the duration of testing (long-term or shock-type testing). Characteristic parameters of 13 hypersonic wind channels of the closed-circuit and open-circuit types are given in a table. The following hypersonic wind channels of long duration are described: closed-circuit and open-circuit wind channels, and plasma channels. Some basic parameters of plasma channels are tabulated. Orig. art. has: 9 figures and 5 tables.

TITLE: Experimental investigations of hypersonic flows, Part 2

SOURCE: Technika lotnicza, no. 1, 1965, 9-15

TOPIC TAGS: hypersonic flow, wind tunnel, aerodynamics, shock tube, Mach number, free flight testing

ABSTRACT: After a brief discussion of shock-type aerodynamic testing, this review article describes shock tubes employed for this purpose. The maximum values of the Mach number attained in various types of shock waves are tabulated. Various methods of obtaining maximum Mach numbers are compared. Then the following wind tunnels of brief operation are described: shock tunnels with three methods of operation (the direct expansion method, the reflected shock wave method, and the tailored interface method), electric-arc wind tunnels, and tunnels with a moving piston. Each description is illustrated by schematic diagrams. Some theoretical considerations and performance characteristics of each type of tunnel are also given. The free-flight technique of testing models is briefly discussed and free-flight tunnels are
